## ***PROFESSIONAL LANDSCAPE MATERIAL***

### Advantages:

- Chemical free weed control
- Patented "Micro-funnels" allow free flow of air, water and nutrients
- Encourages root growth

Control weed growth in your landscaping projects. Landscape material not only deters weeds, it encourages root growth by keeping soil moist and cool. Made of UV-treated polyethylene, these cost-effective products feature patented "micro-funnels" which allow the free flow of air, water and nutrients to soil while blocking sunlight—and weeds! Ideal for landscape beds and perfect around trees and shrubs, and even in potted planters. Keep weeds from growing under decks, gravel pathways, and brick or stone patios. Lay it down around plants or vegetables, cover with mulch or stones, and that's it. Enhance your landscapes, keep your projects weed-free and encourage healthy plant growth.

Quality Seeds West carries PolyPro 55 Landscaping Material in the following sizes: 12'x250', 3'x50', 6'x250'. Polypro 55 is a 4.75 oz per sq yd polypropylene that is woven into a substrate for added strength. The material is then needle punched to enhance water permeability and capillary action. Almost 100% opaque to prevent weed seed germination. UV treated to prevent breakdown in the sun.

For larger projects, we carry the Polyspun 350 Landscaping Material in 3'x50', 4'x100' and 6'x300' size rolls. The Polyspun 350 system of construction achieves superior fibre distribution which results in unique weed prevention capabilities, and accounts for its exceptional strength-to-weight ratio. The natural qualities of polyester provide exceptional ultra-violet stability and unequalled water and air permeability.

Landscape material can be secured with 6" wire staples. We carry individual Geotextile Staples (1000 per box) and convenient welded-cartridge staples designed to fit "The Rifle" Staple Gun, which makes installation a snap.
